

**NAVAL REACTORS DOE DIRECTIVE IMPLEMENTATION BULLETIN  
NUMBER 461.2-130, REVISION 0**

Consistent with the Naval Nuclear Program (NNPP) overall concept of operations, the following provides specific implementation guidance for DOE Order 461.2, ONSITE PACKAGING AND TRANSFER OF MATERIALS OF NATIONAL SECURITY INTEREST, for those activities under the Director's cognizance. This guidance takes precedence over DOE Order 461.2 and guidance found in other DOE related documents.

1. Onsite transfers of hazardous materials of interest to national security shall be performed in accordance with DOE Order 460.1C, as implemented by Naval Reactors Implementation Bulletin number 460.1-97, revision 1. Waivers and exceptions from these requirements shall be submitted to Naval Reactors Headquarters for review and approval.
2. Transfers within the secure area of a Naval Nuclear Propulsion Program facility, to which the public does not routinely have access, shall be handled in accordance with existing Program and facility requirements for protecting the health and safety of site personnel and the environment. Meeting these existing requirements along with the requirements in DOE Order 460.1C, as implemented by Naval Reactors Implementation Bulletin number 460.1-97, revision 1, meets the intent of the requirements in DOE Order 461.2.
